

Triad Boiler Systems, Inc **"Rugged Efficiency" Boiler!!**

Rugged High Efficiency Boiler:

Triad is developed a "**Rugged-Efficiency**" package which is an extremely effective product that combines the high efficiency of a condensing boiler with the advantages of Triad's incredibly rugged steel boilers.

We have matched our vertical modular **Series 2000 MBH Boiler** with a highly engineered stainless steel economizer to achieve efficiencies as high as 95%!

Because we are using a rugged steel boiler we can fire both oil and gas. So, the Rugged Efficiency product will also be a Condensing Dual Fuel Boiler!

This setup is also available in our smaller sizes (Series 1600 and 900) but we know the Series 2000 will be the most popular.

The advantage of a typical condensing boiler is obvious. But typical condensing boilers can be very expensive (sometimes resulting in no payback), with a shorter life spans, and costly ongoing maintenance.

Because Triad's Rugged-Efficiency product is very competitively priced and incredibly rugged, it will have a **Lower Life Cycle Cost** because you won't be replacing an expensive condensing boiler after only a few years.

Stay tuned for more information and details that will be placed on our website. In the mean time, please **contact us**.
